## New version of GNSS solutions download

### Product concerned

Product Names: **GNSS solutions**

Product Family: **Survey / GIS**

#### 1. PURPOSE

Release of new version of GNSS solutions download in order to solve a problem created by GPS satellite n°32

#### 2. PROBLEM / SOLUTION

Since February 26<sup>th</sup> 2008 a new GPS satellite (n°32) has been set healthy and creates a problem in GNSS solutions. Data import is normal but this satellite is seen as n°0 in B file and post process is impossible.

The receivers affected are: LOCUS, Mobile Mappers and ProMark family.

We have corrected this problem in the Download program used by GNSS solutions 2.50.06. In order to fix it you need to replace "engine 32.dll" by a new version of this DLL inside C:\Program Files\GNSS Solutions\Bin.

The new version of the DLL could be found on the ftp site at:

<ftp://ftp.magellangps.com/Land%20Survey/GNSS%20Solutions/Software/download/>

For customers who have lost their R-files it is possible to solve the issue by converting the B-file to Rinex and then import the RINEX data in the project, sat 32 will be lost but all vectors will be computed normally

#### 3. CUSTOMER NOTIFICATION

This information is communicated to all dealers through sales info
